

**HIGH IDLE—TAURUS WITH 3.4L SHO AND RANGER
WITH 2.5L AND MANUAL TRANSMISSION**

**Article No.
00-3-5**

FORD: 1998-1999 TAURUS SHO
1998-2000 RANGER

ISSUE

A high idle may occur on some vehicles. This may be caused by a poor electrical connection at the wire harness (-12B637-) to Throttle Position Sensor (TPS).

ACTION

Splice into wire harness (-12B637-) just after the TPS with TPS Connector High Idle Service Kit. Refer to the following Service Procedure for details.

SERVICE PROCEDURE

Verify the concern vehicle exhibits a "high idle" condition when depressing the clutch or shifting between gears for the Ranger or when shifting between Park and/or Neutral for Taurus SHO. If high idle condition is not exhibited, proceed with other driveability diagnostic fix procedures. If condition is present, obtain a High Idle Service Kit (XF1Z-15K607-AA) and proceed by following the instructions found within the service kit.

PART NUMBER	PART NAME
XF1Z-15K607-AA	High Idle Service Kit
